SUMMARY

Frontend developer with a focus on **React/Next.js** and **TypeScript**. I've built production SaaS interfaces from the ground up — analytics dashboards, real-time data tables, drag-and-drop builders. Comfortable owning the entire frontend side of a project: from architecture decisions to CI config. Looking to bring that ownership mindset to a product-focused team.

SKILLS

- Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- Frameworks:** React, Next.js, NestJS (backend basics), Redux Toolkit, Zustand
- Libraries:** TanStack Query, TanStack Virtual, React Hook Form, Zod, Axios, Recharts, Framer Motion, shadcn/ui, Radix UI, Tailwind CSS
- Tools:** Git, Vite, Biome, Vitest, Docker, Firebase, PostgreSQL

PROFESSIONAL EXPERIENCE

02/2026 – Pres.
SaaS / Production

Frontend Developer (Sole frontend on the team)

Hubnity (hubnity.eu)

Joined as the only frontend engineer and built the entire client-side of a Hubstaff-like time-tracking SaaS from scratch. Responsible for all frontend decisions — architecture, libraries, performance, and code quality standards.

- Built analytics dashboards with interactive charts (Recharts) and virtualized activity logs (TanStack Virtual) — stable 60 FPS with 30–40 concurrent users.
- Implemented a URL-synced filtering system with Zustand + nuqs, so table state survives page refreshes and is shareable via link.
- Set up server-state caching and background refetching with TanStack Query, cutting redundant API calls noticeably.
- Handled multi-timezone scheduling and date logic using date-fns-tz — tricky edge cases with DST and offset arithmetic.
- Configured Biome for linting/formatting and Vitest for unit tests from day one; kept build times fast throughout.

Stack: React 19, Next.js 16 (App Router), TanStack Query, TanStack Virtual, Zustand, Nuqs, Recharts, date-fns-tz, Radix UI, Framer Motion, Tailwind CSS v4, Biome, Vitest, Husky

01/2025 – 01/2026
Monorepo / Fullstack

Fullstack Developer (Core Contributor)

InviteKZ (Startup)

Became the core engineer of an interactive invitation builder after part of the team left. Delivered the product end-to-end, covering both frontend and backend.

- Built a drag-and-drop / resizable canvas builder with React 19, Zustand, and react-rnd — including image cropping and custom date/time pickers.
- Developed the NestJS backend: JWT + Passport auth, cookie sessions, input validation via class-validator.
- Designed DB schema and migrations with TypeORM + PostgreSQL for storing complex user-generated template data.
- Added full i18n using Google Cloud Translation API for dynamic content.
- Set up ESLint, Prettier, Husky, and lint-staged for consistent pre-commit checks across the team.

Stack: NX Monorepo, React 19, Next.js, NestJS, TypeScript, TypeORM, PostgreSQL, JWT, Google Cloud API, Husky

PET PROJECTS

11/2025 – Pres.
Pet Project

My Portfolio

kuzmadev.vercel.app

Personal portfolio with full i18n (next-intl), dark/light theme switching (next-themes), and smooth animations via Framer Motion.

Stack: React 19, Next.js 16 (App Router), TypeScript, Tailwind CSS v4, Framer Motion, next-intl, next-themes

EDUCATION

10/2024 – 01/2026

Software Engineering (JavaScript / Node.js)

Attractor School (Almaty)

Intensive 15-month program. Covered TypeScript/JavaScript, React/Redux, Node.js (Express), SQL/TypeORM, testing (Jest, Playwright). Graduated with 92 score. Certificate ID: AJS-22-005.

2024

The Complete JavaScript & React Course

Udemy (Ivan Petrychenko)

Advanced JS (ES6+), async programming, OOP, component-based design with React.

LANGUAGES

English - B1, Russian - native
