SUMMARY

Frontend developer with 1.5+ years of commercial experience in SaaS products. At Hubnity I am the sole frontend developer: I built the client side of a B2B time-tracking platform from scratch and own it from architecture to release. Before that, at the InviteKZ startup, I ran the product end to end — both the interface and the server side — after part of the team left. Localized the product into 35+ languages and introduced automated checks that catch errors before they ship.

EXPERIENCE

Hubnity — Frontend Developer (sole frontend developer)

February 2026 – Present

hubnity.com — B2B SaaS for time tracking and team productivity (a Hubstaff alternative). Team of 5.

- **Built the product's client side from scratch to release:** 36 modules — analytics dashboards, activity logs, reports, multi-time-zone scheduling, team management. Chose the architecture and stack, and set code standards and automated checks from day one.
- **Localized the product into 35+ languages (10,000+ translation strings)**, including four right-to-left languages — Arabic, Hebrew, Urdu, Dari; the product is ready to sell in new markets (next-intl).
- **Introduced an automated pre-release check of all 141 marketing-site pages:** the very first run caught a bug on 140 of them that no one had noticed before.
- **Coordinated 3 developers from April to August 2026:** task allocation, code review.

Stack: TypeScript, React 19, Next.js 16 (App Router), TanStack Query, TanStack Virtual, Zustand, nuqs, next-intl, Zod, React Hook Form, Recharts, Radix UI, Tailwind CSS, Vitest, Biome, REST API, Git

InviteKZ — Fullstack Developer

January 2025 – January 2026

Startup: an online builder for digital event invitations. Team of 4.

- **After part of the team left, became the product's key engineer and ran it end to end** — the interface and the server side, including authentication and the database (NestJS, PostgreSQL).
- **Developed the product's core tool** — a visual invitation editor: drag-and-drop and resizing of elements, image cropping, date and time pickers; covered key scenarios with unit tests (React, Zustand, react-rnd).
- **Made pre-release code checks more than twice as fast:** tests run only for the changed parts of the project (Nx, GitLab CI).

Stack: TypeScript, React, Next.js, NestJS, Nx, Zustand, PostgreSQL, TypeORM, Tailwind CSS, Docker, GitLab CI

SKILLS

Core: TypeScript, JavaScript (ES6+), React, Next.js (App Router, Server Components, SSR, SSG), HTML5, CSS3, Tailwind CSS

State & Data: TanStack Query, Zustand, Redux Toolkit, React Hook Form, Zod, Axios, REST API

UI: Radix UI, shadcn/ui, Framar Motion, Recharts, i18n / l10n (next-intl, RTL), Accessibility, SEO, Figma

Quality & CI: Vitest, Jest, Playwright, Unit Testing, Code Review, CI/CD, GitLab CI, Docker

Tooling: Git, GitHub, GitLab, Nx Monorepo, pnpm, Vite, Biome, ESLint, Prettier, Husky

Backend: NestJS, Node.js, PostgreSQL, TypeORM, JWT

EDUCATION

Attractor School — Software Engineering (JavaScript / Node.js)

October 2024 – January 2026

Almaty, Kazakhstan. 15 months. Final score 92/100.

LANGUAGES

Russian: Native

English: A2 — Elementary
